HANDRAIL Measure Guide

2-Steps	15"
3-Steps	24"
4-Steps	41-1/4"
5-Steps	55"

** Due to different step height and depth, the correct handrail size should refer to the middle rail length according to your measuring result.

1. Measure Distance on Steps to Land the Posts by using tape measure.
2. Round up the measured inches to decide which size handrail to be installed.

We can offers several fencing solutions to fit your needs. One of our most popular fencing solutions is the steel fence (also known as Steel picket fence and Garrison fencing). This fencing solution is particularly popular for commercial applications as it provides a high level of security at an economical price.

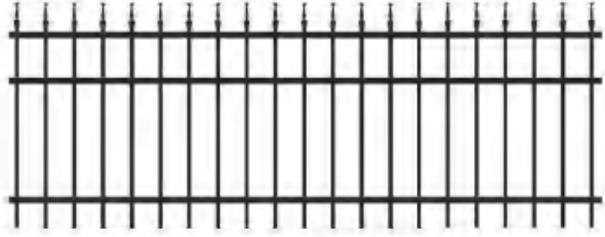

Whether you need a fence for a commercial property, park, or school, look to Fans' steel fences as the ideal solution. Our steel fences offer maximum security, while also providing a lot of cost savings over the lifetime of the fence.

These steel fences are 2100mm tall and made of steel tube. As these are Garrison style fences, they have pressed pointed tips. They give the fence design a feature and they also act as a deterrent as they would be incredibly dangerous and difficult for an intruder to try to climb and enter your premises. Keeping property secured is crucial to prevent damage to your property, theft and authorized access. Keep your employees, customers, products, and information safe with these exceptional steel fences.

 electro-galvanized wire with PVC coating

material	High quality low carbon steel wire, stainless steel wire.
welding and characteristics	including galvanizing before or after welding. It is divided to hot-dipped, electrical galvanizing, PVC coating, plastic-soaked, special electrode welded wire mesh. Have the characteristics of corrosion-resisting and oxidation-resisting.
usefulness	Industry, agriculture, building, transportation, mine, field, lawn, cultivation, profession's guard, decorate, machine protection and etc.

SHEEP WIRE MESH

Material: High quality high carbon steel wire, low carbon steel wire.
 Surface treatment: Electro galvanized, Hot dipped galvanized, High zinc coated.
 Wire diameter: 1.8mm-3.2mm
 Height range: from 0.6m to 2.45m. Common is 1.2m, 1.5m and 1.8m.
 Knot type: Hinge joint type, fixed knot type.
 Tensile strength: 450N/mm²-550N/mm², 700N/mm²-800N/mm², 1200N/mm²-1400N/mm²
 Zinc coated: 12-15g/m², 40-60g/m², >220g/m²
 Application: grassland, forestry and highway

STEEL FRAME LATTICE

- ★ Steel grating is in accordance with certain spacing and bar (twisted steel, square steel, round steel, flat steel, etc.) with a flat cross-aligned and welded into the middle of a square lattice of steel products.
- ★ Steel grid moderators use to do drain cover, steel platform boards, ladders stepping board. After crossbar commonly used twisted square steel. Steel grating commonly used carbon steel, hot dip galvanized appearance, can play role in preventing oxidation. Can also be made of stainless steel. Steel grating with ventilation, lighting, cooling, slip-proof properties.
- ★ Size as your requirement,
- ★ Surface treatment can supplied Self-color, Electro-galvanised or Hot dipped galvanised.

Gabion Wire Mesh

Heavy hexagonal mesh is also called big specification hexagonal mesh or gabion mesh, it is made from high grade steel wire through twisting and braiding by machine. It can mainly used in supporting and protecting of side slope and basis pit, mountain rock hanging mesh, green guard rail netting on side slope, railway guard rail netting, highway guard rail netting. Heavy hexagonal mesh also can be worked into stone cage or stone cushion, and used in reservoir, river or dyke for closure.

GABION NETTING'S CONFIGURATION CHARACTERISTIC:

1. Great perviousness: Keep the hillside and the seaside steady
2. Great pliability: No connection aperture and to be provided with tractility
3. Great anti-corrosion: The heavy galvanized surface and or PVC/PE coated are able to against the corrosion strongly.
4. Resist the scour: To be suitable for seaside and slope defend project.
5. Holistic capability: This cages are perfect to others, it doesn't leave the aperture when constructed in the huge quantity.
6. Easy to Construct: Don't need water, concrete with moulding board, no need electric power also.
7. Application advantage: easy to pack and load. It could be packed according to the design requests. Such as according to be shape of Hillside, Shore & bench, and Dike
8. Economical: use local stone, not need any concrete.
9. Keep entironment: the stone should be filled with soil finally (contrived or natural). The plant can grow in it, So it could keep the water and soil very well and beautify the entironment.

Co-extrusion decking is the upgrade version. It is covered by 360degree protective layer, which can effectively resist the penetration of colored liquid and oily liquid. At the same time, the core material is upgraded and the service life is longer.

Honeycomb Panel

A type of pure aluminum material that gradually developed from military use to building materials

Different films or materials can be used as veneers on the surface, and the usage is very extensive Such as, Ceiling, cabinet, door panel, wall...

The usage scenarios can be for homes, office buildings, subways, airports, sports venues...

Products pic for reference:

Product Advantages

- long service life
- compared to ceramic tiles(gypsum) or wood, it has better stability
- wide range of applications
- better insulation and sound insulation
- size can be made large
- simple construction
- low construction cost
- there are many colors and styles available

I will give you more products introduction based on each advantage

Honeycomb Panel

Structural Diagram

- PP special film
(antioxidant, scratch resistant, easy to clean)
- High quality primary aluminum alloy
- Hot melt pouring and bonding technology
(formaldehyde free and odorless)
- honeycomb sandwich
- Hot melt pouring and bonding technology
(formaldehyde free and odorless)
- High quality primary aluminum alloy
- Back coating
(corrosion resistance, oxidation resistance)

PART 1

- long service life
 - compared to ceramic tiles(gypsum) or wood, it has better stability
- The overall product is made of aluminum, so the stability of the product is very good
Aluminum does not have the problem of rusting, so in warm and humid environments
Its service life will be much longer than traditional wood or gypsum

PART 2

- wide range of applications
 - better insulation and sound insulation
- The center of the product is honeycomb layer, so the weight of the product is light
Although lightweight, the product has high strength because the honeycomb structure is very stable
The honeycomb structure ensures the highest space utilization, strength, and stability
So it is widely used in cabinets, walls, door panels, ceilings, and can be used in office buildings, train stations, airports, sports venues...

Honeycomb Panel

PART 3

- size can be made large
- simple construction
- low construction cost

Usually, gypsum tiles or wood cannot be made in large size, due to the heavy weight, it cannot be installed

However, due to structural issues, honeycomb panels are lightweight and have high strength, making them capable of achieving large sizes

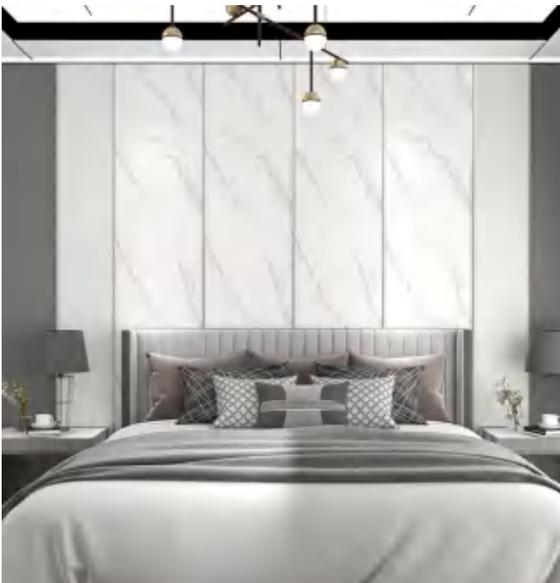

For example, 1x2m, 2x3m or even larger

If it is necessary to use a large area on the wall of a sports stadium or subway station, we can also make honeycomb panels with buckle types,

One is direct splicing, and the other is splicing through screws, just like pics

So construction will be more convenient, and the construction cost will also be lower. Large area direct use will also result in a more beautiful finished product effect. Below are some actual photos

Honeycomb Panel

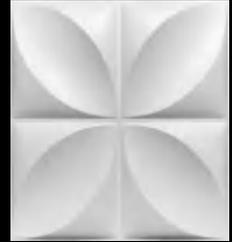

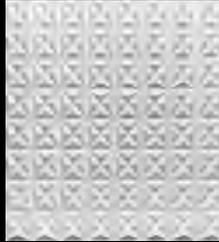

PART 4

· there are many colors and styles available

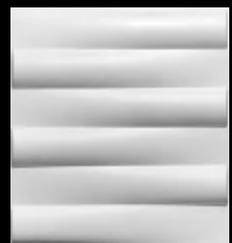

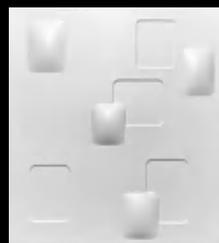

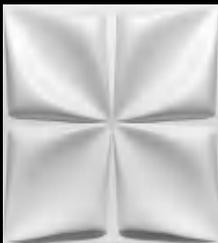

We can use different treatment methods on the surface of the product

Surface(different film or material)	Advantage	PIC
· PP film	<p>Exclusive Patent, antioxidant, scratch resistant, easy to clean(we have videos for the reference) Matte surface, can create bump textures similar as wood surface</p> <p>Usually use for cabinets, partitions, and indoor walls</p>	
· PVC film	<p>Price is lower, can make more complex fabric patterns and colors, can create bump textures</p> <p>Usually use for indoor walls</p>	
· PET film	<p>Highest quality and price film, usually with glossy surface, solid color. antioxidant, scratch resistant, easy to clean</p> <p>Usually used for making cabinets and furniture</p>	
· Painted	<p>Smooth surface, price is low most use for ceiling, indoor walls, cabinets...</p> <p>If use fluorocarbon paint, it can be used outdoors(only this surface can be used outdoors)</p>	
· Wood	<p>More realistic, suitable for special decorations, if thickness is thick can be used for door</p>	
· Stone	<p>More realistic, suitable for special decorations</p>
